ADDITIONAL INFORMATION

PhD thesis topic and research interests

PhD project

- working title: *Inter-individual differences in the production and perception of stress in English complex words*
- topic: My dissertation, which is supervised by Prof. Dr. Sabine Arndt-Lappe, investigates the impact of inter-individual differences in linguistic experience on the stressing of English complex words (such as analysable, regulatory, evaluative). In particular, I want to find out how processing-related factors (such as lexical frequency of the base and the complex word as well as morphological awareness) can shape the representations of complex words in the mental lexicon and how these representations can, in turn, influence the production and perception of stress in these complex words.

Research interests:

- the prosody of complex words
- the morphology-phonology interface
- linguistic productivity
- the mental lexicon
